TESTING

Rich content fixture

A technical reading regression fixture.

David Becker · October 22, 2026 · 8 min read

Simpyll · https://simpyll.com/blog/rich-content-fixture

Writing for clarity

Technical reading with **strong emphasis**, quiet emphasis, and `inline_code_with_a_very_long_identifier_that_should_wrap_safely_on_small_screens`. Visit the journal or external documentation (https://example.com/docs).

Optional new-tab resource (https://example.com/new)

Nested explanations

- First principle
  - Supporting explanation
  - Another detail
- Second principle

1. Inspect the system.
2. Preserve the useful parts.

> Clarity comes from consistent structure, useful examples, and comfortable spacing.

ⓘ **Information: Shared renderer**

Both publishing paths use the same component mapping, semantic tokens, and spacing.

⚠ **Warning**

Review production configuration before deploying.

> **Tip**
>
> Prefer small examples.

> **Important**
>
> Keep content readable without JavaScript.

> **Note**
>
> Supplemental context.

Technical comparison

Component	Semantics	Keyboard support	Publishing compatibility	Notes
Table	Native table with headers	Focusable horizontal scroll	Markdown and Notion	`extraordinarily_long_configuration_identifier`
Disclosure	Native details and summary	Enter and Space	Markdown and Notion	No JavaScript required

Working examples

```typescript
// Preserve syntax, whitespace and nested interpolation.
class Configuration {}
function configure(value: number) { return value + 42 }
const configuration = {
  enabled: true,
  label: 'Keep whitespace intact',
}
console.log(configuration)
```

python

```python
def greeting(name):
    return f"Hello, {name}"
```

unknown-language

```
unknown syntax remains readable <script>never executed</script>
```

Markdown + Notion → shared renderer

One visual language for two authoring paths.

Why use native disclosures?

They preserve keyboard controls and remain useful without JavaScript.

A nested explanation

The browser supplies the interaction.

> Open the original resource to view this content.

Embed unavailable.

A reference with a stable anchor.[1]

Notion output

javascript

```javascript
// JavaScript example
function greet(name) { return `Hello, ${name}` }
const pattern = /hello/gi;
```

tsx

```tsx
type Props = { label: string };
const Button = ({ label }: Props) => <button disabled={false}>{label}</button>;
```

json

```json
{"enabled": true, "count": 42, "label": "example"}
```

bash

```bash
#!/bin/bash
# Shell example
echo "$HOME"
```

css

```css
.example:hover { color: #fff; display: block; }
```

html

```html
<!-- HTML example -->
<div class="example">Readable text</div>
```

markdown

```markdown
# Heading
**Strong** and *emphasis* with `inline code`
- List item
> Quoted text
```

sql

```sql
-- SQL example
SELECT name FROM articles WHERE id = 42 AND status = 'published';
```

text

```text
Plain text stays readable, including <angle brackets>.
```

diff

```diff
-removed line
+added line
```

Code

```
long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_long_line_
```

Note: Fallback contract

Nested paragraph with **emphasis**, `inline code`, and a callout link.

- First item
  - Nested item

typescript

```typescript
const safe = true
```

Note: A deliberately long heading that should wrap naturally even at narrow mobile widths and with enlarged text without overlapping the decorative icon

https://example.com/this/is/a/very/long/unbroken/path/abcdefghijklmnopqrstuvwxyzabcdefghijklmnopqrstuvwxyzabcdefghijklmnopqrstuvwxyz (https://example.com/this/is/a/very/long/unbroken/path/abcdefghijklmnopqrstuvwxyzabcdefghijklmnopqrstuvwxyzabcdefghijklmnopqrstuvwxyz)

Notion heading

<script>alert(1)</script> {globalThis.secret}

Note

Notion informational content

python

```python
def notion_example():
    return "safe"
```

Markdown + Notion → shared renderer

Notion caption

Setting	**Value**
Enabled	Yes
